CMSC 255

Methods Lab

Complete the program, **`Lab7Methods.java,`** by adding the methods specified in parts 1 and 2 below:

PART 1:
Write a static void method called **`greeting`** with three String parameters that formats and prints the date, one partner's first and last name, and the other partner's first and last name in the following format:

> blank line
> **Today is:** <date>
> **We are** <partner one first and last name> **and** <partner two first and last name>
> blank line

PART 2:
1. Write a static value returning method called **`max`** that has two **`int`** parameters, **`num1`** and **`num2`**, and <u>returns</u> the larger of the two integers.
2. Write a static value returning method called **`abs`** that has five **`int`** parameters, **`num1`**, **`num2`**, **`num3`**, **`num4`**, and **`num5`** and <u>returns</u> the sum of the absolute value of each number.
3. These two methods will be called from within a print statement so the result can be printed to the page.
